The Cinergy 2000™ Budgeting system works in the same manner as many popular spreadsheet programs. The budgeting grid is designed to be user friendly, intuitive, and powerful. Cinergy budgeting ships with a standard motion picture budget template already installed. The template serves as a guide to ensure that you account for all expenses. If you are used to working with a particular format and account numbers, then Cinergy™ Budgeting is the product for you. You have the ability to fully customize your budget by adding account numbers and descriptions. Once you have defined your company's standard budget, it can be saved as a custom template. The capability to save and retrieve templates reduces the amount of effort needed to create new budgets. Another powerful feature of the Cinergy™ Budgeting software is the infinite (well, until your computer runs out of disk space...) number of subsheets. After you have configured your top sheet, then you double click on the line that you want to add more detail to and a new subsheet will appear. You can keep on adding more detail and more subsheets until you have the granularity of information that will satisfy your needs. Global variables, categories and user defined equations provides users with the power to perform "What If Analysis" on budget data. You can easily calculate, for example, the impact of changing your shooting location. With multiple sheets, it is easy to get lost and forget where you put a line; we've all done it.

Cinergy™ provides a search function to help locate hard to find categories and entries.

If you're looking for an easy to use and powerful budgeting package then look no further than Cinergy 2000 Budgeting.

Budgeting Features

- User Designable Templates
- Infinite Number Of Account Subsheets
- Account Categories, Fringes & Equations
- Define An Infinite Number Of Sub-Sheets
- Search Budget Data With Ease
